

Incident Notification

Incident Date: July 27, 2022

Title: Ammonia Release

Description: Orano employees were working on the ammonia piping system and shutoff valves to ammonia storage tanks A and C at the McClean Lake operation. During a pre-test inspection, the workers turned the valves and noticed the start of an ammonia release. The workers immediately alerted everyone in the area and closed the valves.

Resolution: The area was secured and a plan developed to safely drain the residual ammonia. No one was injured and there are no effects on the environment. The investigation is ongoing. Provincial and federal regulators were notified.
