

Incident Notification

Incident Date: October 16, 2023

Title: **Radiation Dose Action Level Exceedance**

Description: An administrative level exceedance for elevated uranium in urine concentration was reported on September 20, 2023. After further investigation, it was discovered that three employees exceeded the dose action level of 1mSv/week due to exposure to calcined yellowcake during maintenance activities in the calciner enclosure.

Resolution: Work was stopped and the radiation protection supervisor consulted. Enhanced uranium in urine sampling was taken, and workers prevented from returning to the area until sampling is completed. No effects on the environment, health or safety are expected. Provincial and federal regulators were notified and an investigation into the incident is ongoing.
