

Incident Notification

Incident Date: July 13, 2024

Title: **Dangerous Occurrence – Arm Injury in Rotating Equipment**

Description: While performing work using the mill maintenance lathe and an emery cloth to polish imperfections on a cooling water shaft, an employee's arm was pulled into the rotating shaft. The worker deployed the emergency stop and a nearby employee called the Central Control Room and the Emergency Response Team responded for initial assessment and treatment.

Resolution: The employee's right arm was fractured and they were taken to the onsite medical centre for further treatment before being transported to Saskatoon, Sask. for additional medical treatment. An investigation is ongoing.
