

Incident Notification

Incident Date: March 6, 2025

Title: **McClellan Lake Operation - Recordable Radioactive Release**

Description: Due to upset conditions in calciner operation, approximately 82 L of calcined yellowcake and water solution was released from the calciner stack. The majority of the material was deposited on the roof of the calciner building, with smaller quantities reaching the ground near the calciner on the mill terrace.

Resolution: The calciner was immediately shut down and the area was flagged off to restrict access and prevent the spread of materials. Cleanup efforts are underway and a follow up radiation (gamma) survey will be conducted to ensure all materials have been removed. An investigation into the exact cause is ongoing. The effects on the environment will be negligible. No effects on health or safety. Regulatory authorities have been notified.
