

Incident Notification

Incident Date: March 21, 2025

Title: **McClellan Lake Operation – Reportable Environmental Discharge**

Description: Orano employees discovered approximately 360 kg of molten sulphur had leaked to the ground near the acid plant during the steaming offload procedure. The secondary cap was not in place.

Resolution: A secondary valve assembly was installed to stop the leak. The area was flagged off and cleanup arranged. An investigation is ongoing. The effects on the environment will be negligible. No effects on health or safety. Regulatory authorities have been notified.
