

Incident Notification

Incident Date: December 6, 2021

Title: **Contaminated Slurry Tote**

Description: A contaminated slurry tote from McClean Lake was received at Cigar Lake. Potential contamination was visually identified by Cigar Lake staff. Swipes confirmed the presence of removable contamination to be 6.16 Bq/cm² exceeding the allowable non-fixed contamination limit for transport of 4.0 Bq/cm².

Resolution: No effects on health, safety or the environment. The ore slurry tote was immediately cleaned at Cigar Lake and swipe results confirmed an effective cleaning process. The McClean Lake operation fixed the leaking pipe that caused the contamination and proactively changed the other pipes. The CNSC was notified.
