

The expertise

CIME is recognized for the implementation of processes to reduce water and soil contamination, thereby reducing treatment and landfill costs.

CIME teams are developing processes to remove radioactivity and concentrate it in a reduced volume so that it cannot be disposed of in a specific landfill for nuclear material at a lower cost.

Added value

- Definition of laboratory tests
- Definition of operational performance
- Validation of performance on different samples
- Implementation of the pilot installation
- Development of the protocol directly on the customer's site
